

What is claimed is:

1. An electrical connector comprising:

a connector body portion comprising at least one electrical contact and a groove disposed at least partially around said contact;

5 a cover pivotally connected to said body portion, said cover comprising a sealing wall extending from a surface adjacent said body portion; and

a biasing member biasing said cover toward a closed configuration relative to said body portion;

wherein when said cover is in said closed configuration said sealing wall is

10 disposed at least partially in said groove.
